How to check if a journal is indexed in Scopus

**Step 1**

Open up a web browser and go to Scopus. In the top navigation bar, click on the link Sources.

**Step 2**

Search by the title, ISSN or publisher. If you do not know the full title of the journal, then search by Browse sources.

**Step 3**

If the journal title appears, click on the link to see if it is currently indexed. **Note:** Even though the journal name appears under Source title, it does not mean that the title is currently being indexed in Scopus.

If no results are found, then try searching by Browse sources to find a matching title.
**Step 4**

In **Source details**, look for **Scopus coverage years**. Check to see if the journal is currently indexed by finding “to Present” in the record.
